

Welcome –

To a new era in solid fuel heating. You have chosen to improve your household comfort and increase the efficiency of your heating dollars.

The Coal-trol Digital™ system has been specifically developed to improve the performance and convenience of your anthracite coal stove. A new type of digital thermostat and solid-state control module make this possible.

An investment of a small amount of time to review this manual will ensure proper performance of your Coal-Trol Digital™ system.

Introduction

This manual contains operating instructions for the Coal-trol Digital™ Model **TS2 Thermostat**. This thermostat is designed to work with a PB1, CM1, or CM2 control modules. Refer to the Installation manual for your control module for other information, not found here,

Coal-trol Digital Feature Overview

The Coal-trol Digital System is a complete control system designed for automatically fed stoker stoves and furnaces utilizing anthracite fuel. The stove-mounted Control Module and the wall-mounted Coal-trol Thermostat work together to supervise all stove operations and maintain room temperature to within $\pm 1^{\circ}\text{F}$ of the desired setting.

The Control Module controls the coal feed rate, combustion blower fan, convection blower fan, fire igniter (additional hardware required when available).

All connections to stove blowers, motors, and safety interlocks are done through standard 120VAC cord receptacles.

The Control Module has a lighted power On/Off switch and 120VAC cords for all controlled loads.

The Coal-trol Thermostat may be located up to 100 ft. from the Control Module. Proper temperature control only requires that the heat generated by the stove is readily communicated to the thermostat. (A forced air furnace located in the basement with the thermostat mounted upstairs can work fine).

Fuel feed is continuously adjusted to maintain room temperature as set on the Coal-trol thermostat. The Convection blower is automatically started and continuously adjusted to match the heat output of the stove.

Two temperature setbacks automatically change the temperature at prescribed times set by the user on a 24 hour time cycle.

A room high temperature limit shuts off the stove if feeder failure occurs.

The initial setup of minimum and maximum feed rates, and selection of either dual-motor or single motor (Tri-Burner) stoker styles, allow Coal-trol Digital application to a wide variety of stove configurations and brands.

A One-touch Feed mode assists in starting a fire by continuously stoking coal for 10 minutes at a 100% rate.

All settings, except for time of day clock, are maintained during power loss without batteries.

Power loss ride-through allows the thermostat to continue stove operation if power is restored within 2 hours.

Test Mode sequences all motors and blowers to assist in installation and troubleshooting.

The **Coal-trol Digital TS2 Thermostat** features an LCD display, one LED indicator, and 3 pushbuttons for indication and control of all settings.

Safety Information - Read and pay careful attention before proceeding!

ATTENTION – Please follow all manufacturers instructions that came with your stove or furnace. The Coal-Trol Digital OEM1 is designed to complement and enhance the safe operation of your appliance. Specifically, the Coal-Trol Digital control system has been supplied with appliances tested to ANSI Standard Designation: **E1509–95** , **Standard Specification for Room Heaters, Pellet Fuel-Burning Type** and/or **UL1482 Room Heaters, Solid Fuel Type**.

Use of the Coal-trol Digital™ on appliances not permanently marked with one of the above designations voids all warranties and may be unsafe. Contact us or your stove manufacturer if you are not sure that your stove/furnace is built in compliance with these safety standards.

WARNING – The Coal-trol Digital™ is capable of regulating a coal fire smaller than required to maintain proper chimney draft. Follow all manufacturers recommendations for minimum draft pressures and temperature. Installation of a carbon monoxide detector (not-included) is highly recommended.

This safety information printed on the cover of the Coal-trol Digital™ Power Module:

THIS PRODUCT HAS A GROUNDING TYPE PLUG AND
REQUIRES A GROUNDING TYPE OUTLET. IF THE PLUG
DOES NOT FIT, CONTACT A QUALIFIED ELECTRICIAN.
DO NOT MODIFY THE PLUG IN ANY WAY.

FOR INDOOR USE ONLY.

Other Important Safety Information:

TO REDUCE RISK OF ELECTRICAL
SHOCK, DO NOT CONNECT TO A CIRCUIT
OPERATING AT MORE THAN 150 VOLTS
TO GROUND

RISK OF ELECTRICAL SHOCK: THE CONTROL MODULE
AND THERMOSTAT HAS NO SERVICEABLE PARTS
INSIDE. SEE WARRANTY FOR SERVICE.

WARNING: BYPASS OF POWER VENT FUME SWITCH
OR BONNET TEMPERATURE LIMIT, IF INSTALLED, IS
DANGEROUS. OPERATION MAY CAUSE SERIOUS
INJURY OR DEATH, DUE TO CO_x POISONING OR FIRE.

Coal-trol Digital™ Limited Warranty

THREE-YEAR WARRANTY – Automation Correct LLC (us) warrants this product to be free from defects in material and workmanship. If a defect is found within three years from the date of original installation of the product (whether or not actual use begins on that date) Automation Correct LLC will provide a new or remanufactured part, at our sole option, to replace any defective part, without charge for the part itself.

This warranty does not include labor or other costs incurred for diagnosing, repairing, removing, installing, shipping, servicing or handling of either defective parts or replacement parts.

Warranty Conditions:

1. Warranties only apply to products in their original installation location.
2. Installation, use, care, and maintenance must be normal and in accordance with the instructions contained in the Operation Manual, Installation Manual and Automation Correct LLC's Service Information.
3. Defective parts must be returned to us or an authorized dealer for credit.
4. All work performed during normal business hours.
5. This warranty applies only to residential use.

LIMITATIONS OF WARRANTIES – All implied warranties (including implied warranties of merchantability and fitness for a particular purpose) are hereby limited in duration to the period for which the LIMITED WARRANTY is given and applies. Some states do not allow limitations on how long an implied warranty lasts, so the above may not apply to you. The expressed warranties made in this warranty are exclusive and may not be altered, enlarged, or changed by any distributor, dealer, or other person whatsoever.

Automation Correct LLC will not be responsible for:

1. Damage or repairs as a consequence of faulty installation, misapplication, abuse, improper servicing, unauthorized alteration or improper operation.
2. Failure to operate due to voltage conditions, blown fuses, open circuit breakers or other conditions beyond the control of Automation Correct LLC.
3. Parts not supplied or designated by us, or damages resulting from their use.
4. Automation Correct LLC products installed outside the 50 US states or Canada.
5. Cost of heating fuel of any kind whatsoever including electricity.
6. Any special indirect or consequential property or commercial damage of any nature whatsoever. Some states do not allow the exclusion of incidental or consequential damages, so the above limitation may not apply to you.

This warranty gives you specific legal rights, and you also may have other rights, which vary from state to state.

Locating the Thermostat

The room temperature sensor is located in the Thermostat. For proper operation, the sensor must be exposed to the heat produced by the stove. The preferred mounting locations include: on an inside wall, away from the direct air stream of the convection blower, and away from radiant heat produced by the stove. Note that the Thermostat does not have to be within the same room as the stove. For example, a coal furnace ducted to the return air plenum of an oil or gas furnace will give good results if the Thermostat is mounted next to the oil/gas furnace thermostat.

Connect Thermostat to Control Module

25 ft. Thermostat Cord

The provided 25ft. cord may be extended with an 8 pin, RJ45 to RJ45 coupler and/or standard computer network cable. The cable must be a 'through' type, not a crossover type. Note: The Coal-trol thermostat and Power Module cannot be connected to computer networks through this cable.

Connect the Thermostat cable to the THERMOSTAT connector on the Control Module and the Connector on the rear of the TS2 Thermostat.

Room Over-Temperature Cutout

DISPLAY

ACTION

The temperature sensor in the thermostat has detected a room temperature above 98°F/ 37°C and has disabled the Stoker motor, combustion air motor and the Convection Blower. If installed, the Power Vent motor continues to run.

NOTE

The STATUS indicator light blinks every second.

CAUTION: Before proceeding, investigate the cause of the over-temperature condition.

The HI TEMP display may indicate a problem with your stove, chimney, or Coal-trol Digital System.

Press MENU button to Reset.

The thermostat will not allow the MENU button to reset the thermostat until the room temperature is less than 97°F/ 35°C
